

Hurley Drain Plug Lights[™] are an innovative and inexpensive underwater lighting system for boats of all sizes. Perfect for the stand-alone light on a small fishing boat, for live wells, dock lights, or to complement other underwater lights.

This light system is designed to easily screw into your garboard drain with 1/2" NPT threads. No penetration to the hull.

Light housing is constructed of Polyvinyl Chloride so there is no corrosion or electrolysis problems and extends out from the transom by 3-1/4 inches. Each light can be fitted with either an impressive 50 watt replaceable Halogen or a LED suitable for small to large boats utilizing 12 or 24 volt power.

Battleship Gray, Battleship Tough!
